FedEx Enhances Temp-Assure® Air Services
New Refrigeration Unit Now Available for Air Services

AKRON, Ohio, Nov. 27, 2007—FedEx Custom Critical, North America’s largest critical freight-shipment carrier and FedEx Express, a subsidiary of FedEx Corp. (NYSE: FDX) and the world’s largest express transportation company, are now utilizing new air-cargo container technology from AmSafe® for their temperature-controlled shipping services.

The AcuTemp® RKN, brought to the air-cargo market through AmSafe, uses compressor technology instead of dry ice to keep the inside of the container at the desired shipping temperature. The container’s battery can last for more than 100 hours for safe shipping around the globe. The battery can also be plugged in for easy recharging throughout the life of the shipment.

“This new container gives customers more flexibility and choices in their temperature-sensitive shipping, especially in international lanes,” said Virginia Albanese, president and CEO of FedEx Custom Critical. “Not only are we using the new containers in our current Temp-Assure® offerings, but we are also working with FedEx Express to develop additional cost-effective services to meet more of our customers’ needs.”

Using its suite of Temp-Assure Air services, FedEx Custom Critical offers U.S. and international air solutions to safely ship temperature-sensitive products — from pharmaceuticals and medical supplies to high-end electronics.

FedEx Enhances Temperature-Control Air Solutions
